The dataset comes from the fictitious Parisian company "IceCream' Macaron," taken from my book "Financial Forecast with PowerBI: Story of a Point."

In this Toolbox, we want to project sales in the future by generating forecast with the CAGR method

When and how to use CAGR method? Features of this forecast (1/2)

The CAGR (Compound Annual Growth Rate) is a financial concepts used to estimate the performance of an investment or finally like in the toolbox, the performance of sales.

Typical applications	 Strategic Plan: Many companies need to have a long-term vision, to reassure their shareholders for example, especially for big Firms Currency growth rate 	
General type	Time Series Analysis	
Drivers used (1)	Intensity	
Data required (Reference period)	A minimum of 3 years of sales history, without seasonality cycles. It could be also 3 others period, such month, days. Please note: A period must be complete. The aggregate total is enough	
Projection	3-year forecast. Short terms	
Identification of the turning point	Poor	
Pros	Simple statistical models

(1) More informatiion with my book about forecast drivers.

When and how to use CAGR method? Features of this forecast (2/2)

Cons	However, it has drawbacks. It does not take into account the ups and downs during the analyzed period. Only the final value and the initial value are taken into account.
Notes	 The CAGR is an average of performance. The average performance over the years is different from the annual average. The CAGR does not add up! If your performance increases by 30% then by 20%, in the end it does not increase by 50% (30%+20%), but by 26% (1.3*1.2).
Forecast calculations	Step 1: Calculate CAGR rate: CAGR = (End value/Start value)¹/n - 1 → with "n" is the number of period Step 2: Calculate Forecast: Revenue Year N+1 = Revenue Year N * (1+CAGR) Revenue Year N+2 = Revenue Year N * (1+CAGR)^2 Revenue Year N+3 = Revenue Year N * (1+CAGR)^3 Revenue Year N+4 = Revenue Year N * (1+CAGR)^4 Revenue Year N+5 = Revenue Year N * (1+CAGR)^5 Note: A 3 years forecast is an acceptable limit ("Revenue Year N+3). Futher away it's more random.

 - Label first year forecast value
 - Label Forecast Calculation Period
 - ☐ Label Forecast Period To Extand
 - Label last year forecast value
 - Label middle year actual value
 - Label middle year forecast value
 - Last_Year_To_Forecast
 - Sc. Down CAGR
 - Sc. Down CAGR (label)

- 1 Actual =
- 2 SUM('Fact_Sales Data'[N Value])

The sales measure contains the "N Value", this is the pivot measure.

All metrics are organized into two main folders:

- Sales: This folder groups metrics by financial theme.
- CAGR: This folder contains two sub-folders, calculation and visualisation.

Use case with PowerBI

"Finance Toolbox"

About DAX measures... Measure details

« Last Year Good for Forecast » measure

This measure will be very useful for the measure « FC CAGR Calculation » (see next page), and to avoid a bad CAGR simulation.

```
Last Year Good For Forecast =
3 VAR Last_Year_Reference_Period_Selected =
   YEAR(CALCULATE(
           MAX('Dim Date (Reference Period)'[Date]),
           ALLSELECTED('Dim Date (Reference Period)'[Date])))
   VAR Result =
  IF(
       CALCULATE(
           IF(DISTINCTCOUNT('Fact Sales Data'[Date]) < 0.8 * DISTINCTCOUNT('Dim Date'[Date]),0,1),</pre>
            'Dim Date'[Year]=Last_Year_Reference_Period_Selected)
13
       =0.
           LASTNONBLANK(all('Dim Date'[Year]), CALCULATE([Actual]))-1,
           Last_Year_Reference_Period_Selected)
15
   RETURN Result
```

In line the 11, we check whether each year is full (1) or not (0). To be considered full, the number of days with sales must be equal to at least 80% of all the days of the year.

"Finance Toolbox"

About DAX measures... Measure details

« CAGR rate» measure

Step 1: Calculate CAGR:

CAGR = (End value/Start value) $^{1/n}$ - 1 \rightarrow with "n" is the number of period

```
CAGR Rate =
VAR First_Year_Reference_Period =
YEAR(CALCULATE(
    MIN('DimDate (Reference Period)'[Date]),
    ALLSELECTED('DimDate (Reference Period)'[Date])))
VAR Last Year Reference Period =
[Last Year Good For Forecast]
VAR Number Of Year =
Last_Year_Reference_Period - First_Year_Reference_Period
VAR End Value =
CALCULATE([Actual],DimDate[Year]=Last Year Reference Period)
VAR Start Value =
CALCULATE([Actual],DimDate[Year]=First Year Reference Period)
VAR Rate CAGR = DIVIDE
    (End Value, Start Value)^(1/Number Of Year)-1
RETURN Rate CAGR
```

Use case with PowerBI

"Finance Toolbox"

About DAX measures... Measure details

« FC CAGR rate» measure

FC = ForeCast

Step 2: Calculate Forecast:

```
Revenue Year N+1 = Revenue Year N * (1+CAGR)
Revenue Year N+2 = Revenue Year N * (1+CAGR)^2
Revenue Year N+3 = Revenue Year N * (1+CAGR)^3
Revenue Year N+4 = Revenue Year N * (1+CAGR)^4
```

Revenue Year N+5 = Revenue Year N * (1+CAGR)^5

Note: The value "N" is the measure "Last Year Good for Calculation" (see previous page)

About visualizations... Find the main colors

For my book "Story of a point", I took my inspiration from the book "Super Graphic" by Tim Leong (June 2013). An amazing book for color research.

When I find my main colors, then I search for the hexadecimal code with my smartphone and the "What a color?" mobile application. This application is really usefull to catch the color and the hexadecimal code.

With PowerPoint I test a lot of colors until I find 3 main colors (but here 4) and 3 secondary colors. My favorite color for the book theme and for PowerBI files is the color called:

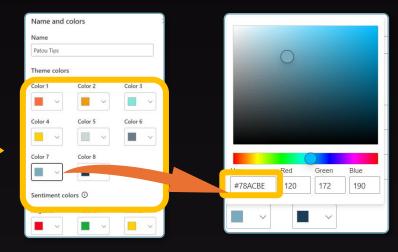

About visualizations... Create colors theme in PowerBI

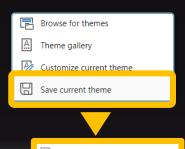

On PowerBI click on "Customize current theme" Path: View > Themes

Insert Modeling View ☐ ✓ ☐ Gridlines Lock objects This report Accessible themes Internal Internal Browse for themes Customize current theme

Here it's the creation of the 7 colors that I choosed before. And I put the hexadecimal codes for each colors.

Save your final theme, if you want to use it for an another PowerBi project. A json file will be create.

Patou Tips Colors.json

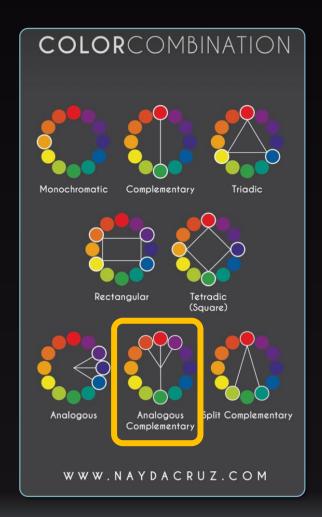

Use case with PowerBI

"Finance Toolbox"

About visualizations... Find the good harmony

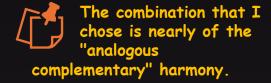

Anything is possible, but often it's better to create your color theme according to color combinationrules.

Sometimes, when I find colors, I reopen my project a few days later just to see if the impact or mood I wanted is still the same.

Sometimes I change the theme 4 or 5 times!

About visualizations... UI/UX: Create Pop-Up (1/4)

Pop-ups are truly one of the best practices for giving your users the freedom to adjust their work. This creates interactivity and interest in a PowerBI project.

Use case with PowerBI

"Finance Toolbox"

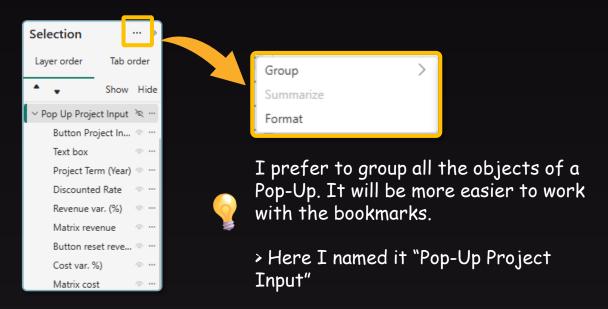

About visualizations... UI/UX: Create Pop-Up (2/4)

Organise objets with "Selection panel"

This step is important to better manage the different objects in your Pop-Up and also to create interactivity with bookmarks (see next page).

In the selection panel, gather all the objects of a Pop-Up into a group

Use case with PowerBI

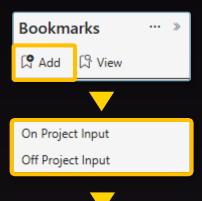

"Finance Toolbox"

About visualizations... UI/UX: Create Pop-Up (3/4)

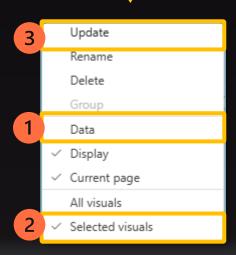

Create "Bookmarks" for the Pop-Up

In the Bookmarks panel, add two bookmarks:

Create one to show the pop-up (On) and one to close it (Off).

For each Bookmark,

Before all, select the group of object in the selection Pane (see previous page), then:

- 1 Unselect "Data"
- 2 Select "Selected visuals"
- 3 Then "Update"

Use case with PowerBI

"Finance Toolbox"

About visualizations... UI/UX: Create Pop-Up (4/4)

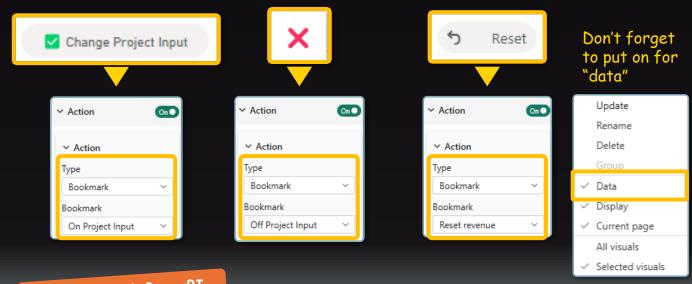

Create buttons and their interactivity

1 Create buttons

2 Create a bookmark for each button (see previous page) and place the bookmark on the "action" configuration button

Use case with PowerBI

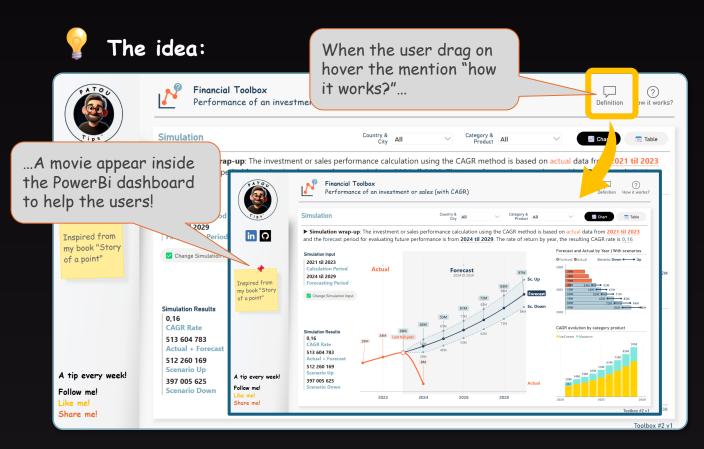

"Finance Toolbox"

About visualizations... UI/UX: How it works button (1/4)

Create a movie to help your users in PowerBI

Start with PowerBI

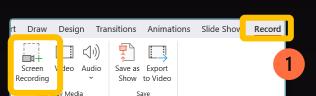

"From Rookie to Rock"

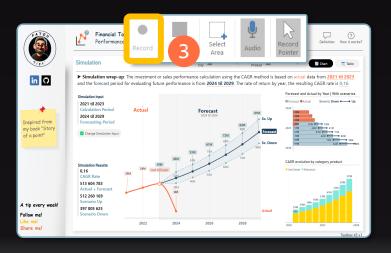

About visualizations... UI/UX: How it works button (2/4)

Create the movie in PowerPoint

- On PowerPoint:
 Path: Record > Screen
 Recording
- A pop-up appear, with the button "Select Area" select the aera on your PowerBi project. A dashed red line indicate you the aera.
- Click on record to start and the touchs

 + H + Q to stop the movie. It's done!

Start with PowerBI

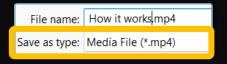

"From Rookie to Rock"

About visualizations... UI/UX: How it works button (3/4)

Save the movie as an animated GIF

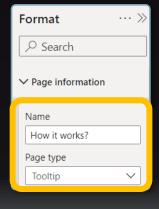

How it works.aif

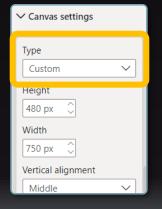

In PowerPoint save your record as MP4 format

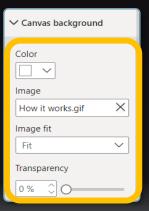

Use an online service or a software to convert your file from MP4 format to an animated GIF. Here I use "Convertio"

On PowerBI, create a new page for the animated GIF

Settings of the page

Start with PowerBI

"From Rookie to Rock"

About visualizations... UI/UX: How it works button (4/4)

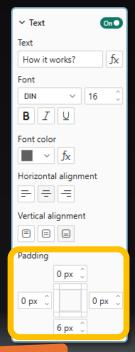

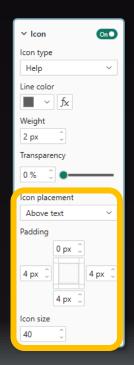

On PowerBI, create a button

The final result: Drag on hover the button "How it works?" a help symbol (?) appear, To drag on hover this symbol will display the movie.

Start with PowerBI

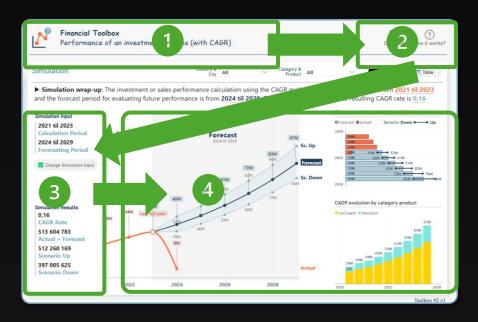

"From Rookie to Rock"

About visualizations... Storytelling: "Z reading pattern".

The organization and prioritization are with the "Z reading pattern". The natural reading direction is often from left to right and from top to bottom in a "Z" shape.

- 1 Topic of the projet
- 3 KPI of the project
- 2 Help and definition
- 4 Visualization of the project

Use case with PowerBI

"Finance Toolbox"

Don't forget!
This isn't the truth, it's just my truth!
